## **ViewSonic**

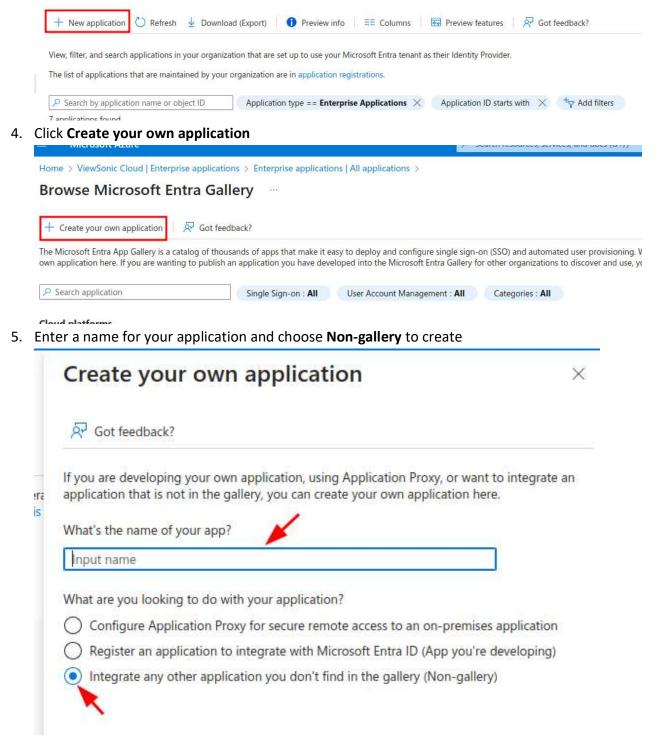

## Microsoft Entra ID SCIM Instruction v1.0

This document outlines the steps for establishing a connection to synchronize users from Microsoft Entra ID to ViewSonic account system using SCIM. To complete the integration, you must first create an enterprise application within your Microsoft Entra ID.

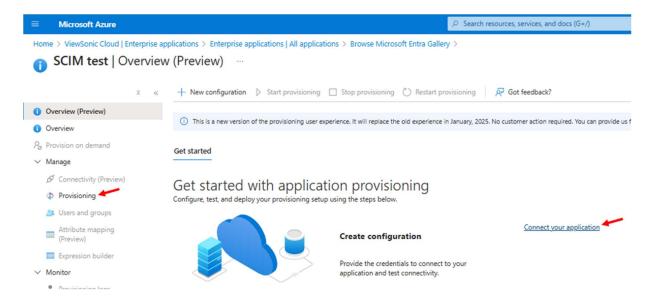

- 1. Sign in to Microsoft Azure portal
- 2. Choose Microsoft Entra ID and click Enterprise applications from the left panel
  - 1 ViewSonic Cloud | Overview

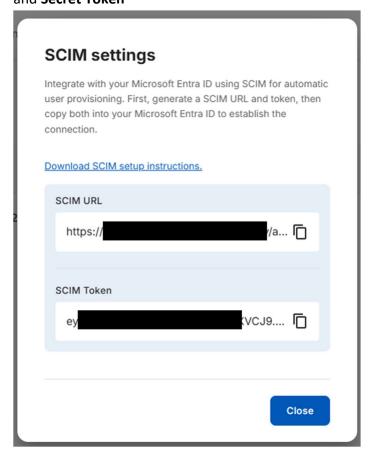

3. Click New application

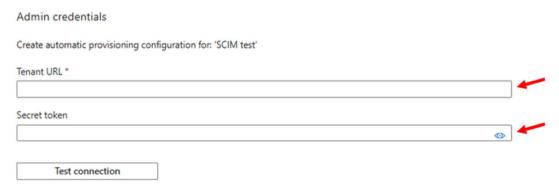

6. In the application management page, click **Provisioning** and then click **Connect your** application

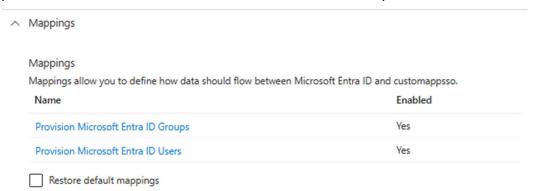

7. Copy URL and token from **ViewSonic entity portal** and then paste them in **Tenant URL** and **Secret Token** 

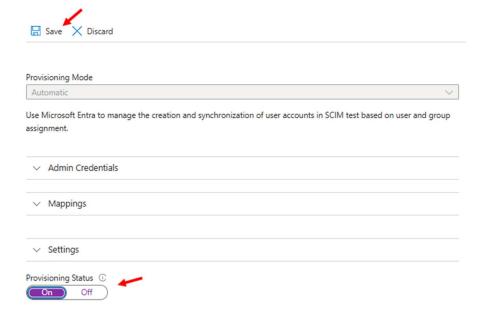

- 8. Click **Test Connection** to have Microsoft Entra ID try to connect to the SCIM endpoint. If the test fails, error information will be displayed.
- 9. If the test succeeds, click **Create** to create the configuration.
- 10. After the creation, go back to **Provisioning** to review **Mappings** and **Settings**.
- 11. In the **Mappings** section, there are two sets of attribute mappings: one for **users object** and the other for **groups object**. Select each one to review the attributes that are synchronized from Microsoft Entra ID to ViewSonic account system.

12. Under **Settings**, the **Scope** field defines which users and groups are synchronized. Select **Sync only assigned users and groups** (recommended) to only synchronize the users and groups assigned in the users and groups objects.

13. Once your configuration is complete, set **Provisioning Status** to **On**.

14. Click **Save** to start the Microsoft Entra ID provisioning service and the synchronization will be executed automatically with the defined provisioning interval.
